2 **CLAIMS**

3

4 **What is claimed and worthy of a letter patent is**5 **1. A reflective optical element comprising:**6 **a lens possessing at least one optically shaped surface, a portion of which is**7 **suitable as an adhesive substrate,**8 **on which is disposed a lens film comprising**9 **(1) an adhesive layer and backing selected to maintain a uniform thickness**10 **when deformed,**11 **(2) a metal foil, and metallized polymer layer possessing**12 **a uniform light reflecting surface and of a thickness selected to be flexible when**13 **deformed,**14 **wherein said lens film is applied and secured to said lens with**15 **pressure and stress to conform to said optically shaped surface and**16 **adhere said adhesive backing to said lens substrate.**17 **2. The reflective optical element of claim 1 wherein said light reflecting surface is**18 **selected and positioned within the optical train of a spectacle mounted display**19 **and viewer.**20 **3. The reflective optical element of claim 1 whereby said lens film is partly**21 **transparent.**22 **4. The reflective optical element of claim 2 whereby the image quality of said**23 **spectacle mounted display is suitable for the display of a limited quantity of text.**
